FYP-1 · FALL 2026 · P4 · GITHUB TICKETS

Trimly: GitHub tickets for FYP-1

Trimly: Intelligent Salon Booking & Management Platform. Every task you are given from Meeting 2 to the Declaration, split into tickets that one person can finish. Create one GitHub issue per ticket, assign it, and close it only when it is done.

Team	Muhammad Zain · Ali · Hassan Ahmed Siddiqui · Muhammad Muzammil
Stack	React Native (Expo) · Node.js/Express · MongoDB Atlas · Socket.IO · n8n · DeepInfra API · Google Maps / MapLibre
Roles	Customer, Barber, Salon Owner

52
tickets for FYP-1

7
milestones: M2 to M7 + Declaration

27
tickets labelled demo: shown working at the meeting

3
Figma / design tickets

How to use this PDF

1. **Create the milestones and labels** below in your repository (Issues → Milestones, Issues → Labels).
2. **Create one issue per ticket.** Title = ID + title, e.g. `[P4-06] Mongoose schemas from the ERD`. Body = the template at the bottom of this page. Add its labels and milestone.
3. **Assign exactly one member** per ticket. Spread tickets so every member owns real features in every milestone.
4. **Add every issue to a GitHub Project board** with columns Backlog → To do → In progress → In review → Done.
5. **Branch per ticket**: `p4-07-short-name`. Open a pull request that says `Closes #<issue number>`. Another member reviews it.
6. **Close a ticket only when every checkbox is ticked.** Tickets labelled **demo** close after they are shown working at the meeting.
7. **M2 tickets are already done** (submitted on 24 Oct): create them and close them, so the board shows your full history.

Why tasks are split

Your Meeting 3 task reads: "*SRS + diagrams + ERD · demo JWT login with roles + customer registration/profile*". That is not one ticket. It is **14 tickets**: the SRS, each diagram, each feature (sign-up is not sign-in) and the setup work. Rule: **one ticket = one deliverable, one owner, at most one week of work**, and you can say exactly when it is done.

Issue template

Copy this into every issue body (or save it as `.github/ISSUE_TEMPLATE/task.md`) and fill it from the ticket.

```
## Description
<copy the description from the ticket>

## Acceptance criteria
- [ ] <first box from the ticket>
- [ ] <second box>
- [ ] <…>

## FYP-1 scope item
<the Scope line from the ticket>

## Evidence (fill in when done)
- Pull request: #
- Screenshot / demo note:
- Reviewed by:

Milestones

Milestone	Due date	Task given	Tickets
M2	24-Oct-26	Clickable mockups (Figma): customer, barber & salon-owner apps	4
M3	07-Nov-26	SRS + diagrams + ERD · demo JWT login with roles + customer registration/profile	14
M4	21-Nov-26	Demo salon discovery (maps), service menu, barber selection, slot booking & favourites	7
M5	05-Dec-26	Demo barber & owner dashboards, chat, push, cancel/reschedule, ratings & loyalty points	10
M6	19-Dec-26	Demo AI recommendations, smart slots, no-show risk score & off-peak discounts · report Ch 1–2 draft	6
M7	02-Jan-27	Demo sentiment alerts, n8n pipeline, revenue charts, real Karachi data · ALL FYP-1 · report Ch 1–3	10
M8	09-Jan-27	Declaration: FYP-1 scope verified working	1

Set each milestone's due date to the meeting date. Create one more milestone, **FYP-2**, for the backlog on the last page.

Labels

Label	Colour	Use it for
design	`#a855f7`	Figma mockups, UI design
feature	`#2563eb`	Working functionality in the app
diagram	`#0891b2`	UML, ERD, DFD, use case, architecture
docs	`#64748b`	SRS, report chapters, README
ai-ml	`#db2777`	Models, datasets, AI integration
test	`#16a34a`	Test cases, evaluation, QA
devops	`#ea580c`	Setup, deployment, CI, monitoring
frontend	`#93c5fd`	Web screens and dashboards
mobile	`#a5b4fc`	Mobile app screens
backend	`#86efac`	APIs, services, business logic
database	`#fcd34d`	Schema, rules, migrations, queries
demo	`#dc2626`	Must be shown working at the meeting
backlog	`#94a3b8`	FYP-2 items, not started yet

> **The advisor checks the board.** Who owns what, how long tickets stay open, and the pull requests behind them are evidence for individual marks.

MILESTONE M2 · MEETING 2 · 24-OCT-26 · ALREADY SUBMITTED: CREATE THESE ISSUES AND CLOSE THEM

Clickable mockups (Figma): customer, barber & salon-owner apps

Split into **4 tickets** (P4-01 to P4-04)

P4-01 Milestone M2 · 24-Oct-26

Figma: Customer app

design frontend

Discovery, salon page, barber pick, slot booking, bookings, chat, profile.

☐ Booking flow clickable end to end

Scope: Design mockup & prototype Assignee: _____

P4-02 Milestone M2 · 24-Oct-26

Figma: Barber app

design frontend

Daily schedule, availability toggle, mark completed, reviews.

☐ Schedule and toggle linked

Scope: Design mockup & prototype Assignee: _____

P4-03 Milestone M2 · 24-Oct-26

Figma: Salon owner app

design frontend

Staff management, prices, analytics, discounts.

☐ Staff and price edit flows linked

Scope: Design mockup & prototype Assignee: _____

P4-04 Milestone M2 · 24-Oct-26

Backend architecture diagram (PDF)

diagram

One-page backend architecture: React Native app ↔ Express (routes → middleware → controllers → services → repositories) ↔ MongoDB Atlas; n8n, DeepInfra, push, Cloudinary. Named style, why it was chosen, sync vs async paths, legend.

☐ Architecture style named with one rejected alternative
☐ Every arrow labelled with protocol or data
☐ Public vs private zones and external services shown
☐ Exported as PDF and committed to /docs

Scope: supporting task Assignee: _____

MILESTONE M3 · MEETING 3 · 07-NOV-26

SRS + diagrams + ERD · demo JWT login with roles + customer registration/profile

Split into **14 tickets** (P4-05 to P4-18)

P4-05 Milestone M3 · 07-Nov-26

Express API + MongoDB Atlas setup

devops backend

Project structure, env config, health route, Atlas connection.

- ☐ Runs locally with .env.example
- ☐ No secrets committed

Scope: Database schema design Assignee: _____

P4-06 Milestone M3 · 07-Nov-26

Mongoose schemas from the ERD

database backend

Users, salons, services, barbers, slots, bookings with indexes.

- ☐ Embed vs reference decision documented per schema
- ☐ Unique and geo indexes created

Scope: Database schema design (ERD) Assignee: _____

P4-07 Milestone M3 · 07-Nov-26

Customer registration

feature mobile backend demo

Register with name, phone / email and password.

- ☐ Validation (Joi / Zod)
- ☐ Password hashed
- ☐ Duplicate account rejected

Scope: Customer registration, login & profile Assignee: _____

P4-08 Milestone M3 · 07-Nov-26

Login with JWT (access + refresh)

feature backend demo

Single login for all roles; JWT carries role.

- ☐ Access token expiry and refresh flow
- ☐ Token stored securely on the phone (SecureStore)

Scope: Single auth with role-based JWT routing Assignee: _____

P4-09 Milestone M3 · 07-Nov-26

Role middleware + role-based app navigation

feature backend mobile demo

API checks role; app opens Customer, Barber or Owner home.

- ☐ Customer token to an owner route gets 403
- ☐ Three test accounts land on three homes

Scope: Single auth with role-based JWT routing Assignee: _____

P4-10 Milestone M3 · 07-Nov-26

Customer profile: view and edit

feature mobile backend demo

Profile screen with edit and photo.

- ☐ Changes saved and shown after restart

Scope: Customer registration, login & profile Assignee: _____

P4-11 Milestone M3 · 07-Nov-26

Repository setup: README, branches, labels, project board

devops

Prepare GitHub so every later ticket can be tracked: README, branch rules, labels, milestones, board.

- ☐ README: project summary, stack, how to run, Figma link
- ☐ main branch protected; work via pull requests
- ☐ Labels and milestones M2 to M8 created as in this PDF
- ☐ Board columns: Backlog, To do, In progress, In review, Done

Scope: supporting task Assignee: _____

P4-12 Milestone M3 · 07-Nov-26

SRS document v1.0

docs

Software Requirements Specification following the CivicFix sample: scope, user classes, FRs with IDs, NFRs with numbers, access matrix, traceability.

- ☐ Every FYP-1 scope item appears as an FR with ID, priority and phase
- ☐ NFRs are measurable
- ☐ Access matrix (role × action) included
- ☐ Traceability matrix has an owner per row
- ☐ PDF sent on Fri 6 Nov

Scope: supporting task Assignee: _____

P4-13 Milestone M3 · 07-Nov-26

Use case diagram

diagram

Actors = SRS roles; system boundary; «include» / «extend» where they apply.

- ☐ Every use case maps to at least one FR
- ☐ Non-human actors marked «system» or «time»
- ☐ Legend included

Scope: supporting task Assignee: _____

P4-14 Milestone M3 · 07-Nov-26

DFD Level 0 and Level 1

diagram

Context diagram, then 5 to 9 numbered processes with data stores.

- ☐ Every flow labelled with its data
- ☐ Level 1 balances with Level 0
- ☐ Data stores numbered D1, D2 ...

Scope: supporting task Assignee: _____

P4-15 Milestone M3 · 07-Nov-26

ERD + document model

diagram database

ERD for the concepts + document model (collections, embed vs reference, indexes).

- ☐ Every entity / collection has a key
- ☐ Relationships show cardinality
- ☐ Names match the SRS and class diagram
- ☐ Embed vs reference decision written next to each collection

Scope: supporting task Assignee: _____

P4-16 Milestone M3 · 07-Nov-26

Class diagram

diagram

Domain classes with attributes, operations and relationships.

- ☐ Multiplicities on associations
- ☐ At least one inheritance or interface where it is real
- ☐ Operations come from use cases

Scope: supporting task Assignee: _____

P4-17 Milestone M3 · 07-Nov-26

Sequence diagram: JWT login with role-based routing

diagram

One scenario, the one demoed on 7 Nov: JWT login with role-based routing.

- ☐ Messages numbered and named like real calls
- ☐ Replies shown
- ☐ At least one alt / opt box for a failure case

Scope: supporting task Assignee: _____

P4-18 Milestone M3 · 07-Nov-26

Activity diagram: book → hold slot → confirm

diagram

Main business workflow with swimlanes: book → hold slot → confirm.

- ☐ Start and end nodes
- ☐ Every decision has guards covering all cases
- ☐ Swimlanes per actor / system

Scope: supporting task Assignee: _____

MILESTONE M4 · MEETING 4 · 21-NOV-26

Demo salon discovery (maps), service menu, barber selection, slot booking & favourites

Split into **7 tickets** (P4-19 to P4-25)

P4-19 Milestone M4 · 21-Nov-26

Salon discovery list with area filter

feature mobile backend demo

Salons near the user, filter by area.

- ☐ Geo query with 2dsphere index
- ☐ Empty result handled

Scope: Salon discovery with area filtering Assignee: _____

P4-20 Milestone M4 · 21-Nov-26

Salon map view

feature mobile demo

Salons as markers on a map; tap opens the salon page.

- ☐ Markers match the list

Scope: Salon discovery with Google Maps Assignee: _____

P4-21 Milestone M4 · 21-Nov-26

Service menu with prices

feature mobile backend demo

Services, duration and price per salon.

- ☐ Prices come from the database, not hard-coded

Scope: Service menu with transparent pricing Assignee: _____

P4-22 Milestone M4 · 21-Nov-26

Barber list with availability status

feature mobile backend demo

Barbers of a salon with available / busy status.

- ☐ Status updates without app restart

Scope: Barber selection with availability Assignee: _____

P4-23 Milestone M4 · 21-Nov-26

Slot generation from barber hours

feature backend

Generate bookable slots from working hours and service duration.

- ☐ Unit tests for edge cases (breaks, closing time)

Scope: Time-slot booking Assignee: _____

P4-24 Milestone M4 · 21-Nov-26

Booking with double-booking prevention + appointment code

feature backend mobile demo

Book a slot atomically; generate a unique appointment code.

- ☐ Two simultaneous bookings of one slot: only one succeeds (test)
- ☐ Appointment code shown and stored

Scope: Time-slot booking with appointment code Assignee: _____

P4-25 Milestone M4 · 21-Nov-26

Favourite barbers and salons

feature mobile backend demo

Add / remove favourites; favourites tab.

- ☐ Persists across devices

Scope: Favourite barbers & salons Assignee: _____

MILESTONE M5 · MEETING 5 · 05-DEC-26

Demo barber & owner dashboards, chat, push, cancel/reschedule, ratings & loyalty points

Split into **10 tickets** (P4-26 to P4-35)

P4-26 Milestone M5 · 05-Dec-26

Barber: daily schedule

feature mobile backend demo

Today's bookings in time order.

☐ Live update on new booking

Scope: Barber dashboard Assignee: _____

P4-27 Milestone M5 · 05-Dec-26

Barber: availability toggle + mark completed

feature mobile backend demo

Go available / busy; mark a booking completed.

☐ Completed booking triggers loyalty points

Scope: Barber dashboard Assignee: _____

P4-28 Milestone M5 · 05-Dec-26

Owner: staff management

feature mobile backend demo

Add, edit and remove barbers.

☐ Only the salon owner can edit

Scope: Salon owner dashboard Assignee: _____

P4-29 Milestone M5 · 05-Dec-26

Owner: price updates

feature mobile backend demo

Edit service prices; change history kept.

☐ Old bookings keep their price

Scope: Salon owner dashboard Assignee: _____

P4-30 Milestone M5 · 05-Dec-26

Ratings and reviews per barber

feature mobile backend demo

Customer rates and reviews after a completed booking.

☐ Only after completion

☐ Average rating updated

Scope: Ratings & reviews Assignee: _____

P4-31 Milestone M5 · 05-Dec-26

Loyalty points on completed bookings

feature backend demo

Award points once per completed booking.

☐ Idempotent: no double points (test)

Scope: Loyalty points Assignee: _____

P4-32 Milestone M5 · 05-Dec-26

In-app chat (Socket.IO)

feature mobile backend demo

Customer ↔ salon chat with history.

☐ Messages stored

☐ Socket authenticated with JWT

Scope: In-app chat Assignee: _____

P4-33 Milestone M5 · 05-Dec-26

Cancellation and reschedule policy engine

feature backend demo

Rules for when cancel / reschedule is allowed and the refund due.

☐ Rules configurable per salon

☐ Unit tests for each rule

Scope: Cancellation & reschedule policy engine Assignee: _____

P4-34 Milestone M5 · 05-Dec-26

Push: booking confirmation

feature backend mobile demo

Push on booking confirmed.

☐ Arrives within 30 s

Scope: Push notifications Assignee: _____

P4-35 Milestone M5 · 05-Dec-26

Push: booking reminders

feature backend

Reminder before the appointment.

☐ Scheduled job; no duplicate reminders

Scope: Push notifications Assignee: _____

MILESTONE M6 · MEETING 6 · 19-DEC-26

Demo AI recommendations, smart slots, no-show risk score & off-peak discounts · report Ch 1–2 draft

Split into **6 tickets** (P4-36 to P4-41)

P4-36 Milestone M6 · 19-Dec-26

Barber and service recommendations

ai-ml backend demo

Recommend barbers / services from history (rules + cold start).

- ☐ Cold-start behaviour defined
- ☐ Explained "why recommended"

Scope: AI barber & service recommendation Assignee: _____

P4-37 Milestone M6 · 19-Dec-26

Smart slot suggestions from booking density

ai-ml backend demo

Suggest less busy slots from historical density.

- ☐ Uses at least 4 weeks of (seeded) data

Scope: Smart slot suggestion Assignee: _____

P4-38 Milestone M6 · 19-Dec-26

No-show risk score (0-100)

ai-ml backend demo

Heuristic score shown on the barber dashboard.

- ☐ Features and weights documented
- ☐ Validated on seeded history

Scope: No-show risk scoring Assignee: _____

P4-39 Milestone M6 · 19-Dec-26

Off-peak discount suggestions for owners

ai-ml backend demo

Suggest discounts when occupancy is under 35%.

- ☐ Owner can accept or ignore

Scope: AI off-peak discount suggestions Assignee: _____

P4-40 Milestone M6 · 19-Dec-26

Report Ch 1: Introduction (draft)

docs

Problem, motivation, objectives, scope (FYP-1 / FYP-2), report outline.

- ☐ Objectives are measurable
- ☐ Scope matches the SRS
- ☐ Draft shared for advisor comments

Scope: supporting task Assignee: _____

P4-41 Milestone M6 · 19-Dec-26

Report Ch 2: Literature review (draft)

docs

At least 8 related systems or papers, compared in a table; gap your project fills.

- ☐ Comparison table of features vs your system
- ☐ Every source cited (IEEE style)
- ☐ Gap statement at the end

Scope: supporting task Assignee: _____

MILESTONE M7 · MEETING 7 · 02-JAN-27

Demo sentiment alerts, n8n pipeline, revenue charts, real Karachi data · ALL FYP-1 · report Ch 1–3

Split into **10 tickets** (P4-42 to P4-51)

P4-42 Milestone M7 · 02-Jan-27

Review sentiment analysis + owner alert

ai-ml backend demo

Score review sentiment (DeepInfra); alert owner on negative reviews.

- ☐ Retry and 10 s timeout on the AI call
- ☐ Alert arrives for a negative test review

Scope: Review sentiment analysis Assignee: _____

P4-43 Milestone M7 · 02-Jan-27

n8n: post-visit review request

feature devops demo

Workflow sends a review request after a completed visit.

- ☐ Webhook signed (HMAC)

Scope: n8n pipeline Assignee: _____

P4-44 Milestone M7 · 02-Jan-27

n8n: loyalty update

feature devops

Workflow confirms loyalty points to the customer.

- ☐ No duplicate messages

Scope: n8n pipeline Assignee: _____

P4-45 Milestone M7 · 02-Jan-27

Owner revenue and booking trend charts

feature mobile backend demo

Revenue and bookings by day / week.

- ☐ Numbers match the database

Scope: Revenue & booking trend charts Assignee: _____

P4-46 Milestone M7 · 02-Jan-27

Real Karachi salon data collection

docs test

Collect real salon names, areas, services and prices (with permission where needed).

- ☐ At least 15 salons
- ☐ Source noted per salon

Scope: Real Karachi salon data Assignee: _____

P4-47 Milestone M7 · 02-Jan-27

Import real salon data

database backend demo

Load the collected data into the app.

- ☐ Shown in discovery and maps

Scope: Real Karachi salon data Assignee: _____

P4-48 Milestone M7 · 02-Jan-27

Deploy API, database and n8n

devops

API on Render, MongoDB Atlas, n8n hosted; Expo build for demo.

- ☐ Public API URL
- ☐ No secrets in the repo

Scope: supporting task Assignee: _____

P4-49 Milestone M7 · 02-Jan-27

Report Ch 3: Analysis diagrams

docs diagram

SRS summary plus all diagrams, updated to match what was built.

- ☐ Every diagram matches the working system
- ☐ Each diagram has a short explanation paragraph

Scope: supporting task Assignee: _____

P4-50 Milestone M7 · 02-Jan-27

Compile FYP-1 report soft copy (Ch 1 to 3)

docs

Merge chapters, apply the university template, references, figure list.

- ☐ Advisor comments on Ch 1 and 2 addressed
- ☐ Template, numbering, captions and references consistent
- ☐ PDF submitted by 2 Jan

Scope: supporting task Assignee: _____

P4-51 Milestone M7 · 02-Jan-27

End-to-end demo script for all FYP-1 items

test

One script that walks every FYP-1 scope item in order, with test accounts and data ready.

- ☐ Every FYP-1 ticket appears in the script
- ☐ Runs start to finish in under 8 minutes
- ☐ Backup recording made

Scope: supporting task Assignee: _____

MILESTONE M8 · DECLARATION · 09-JAN-27

Declaration: FYP-1 scope verified working

Split into **1 tickets** (P4-52 to P4-52)

P4-52 Milestone M8 · 09-Jan-27

Declaration: verify FYP-1 scope checklist

test

Walk every FYP-1 ticket with the advisor's checklist; only items shown working count.

- ☐ Every FYP-1 ticket closed with a demo note
- ☐ Open bugs listed with a plan
- ☐ Scope % agreed with the advisor

Scope: supporting task Assignee: _____

MILESTONE FYP-2 · NEXT SEMESTER

FYP-2 backlog

Create these as issues in the **FYP-2** milestone with label **backlog**. They will be split into detailed tickets at the start of FYP-2.

ID	Backlog item
P4-B01	JazzCash / Easypaisa sandbox payment integration
P4-B02	WhatsApp Business API integration (360dialog)
P4-B03	n8n pipeline for WhatsApp rebooking reminders
P4-B04	AI hairstyle recommendation (photo + chat, vision-language AI)
P4-B05	Curated reference images for recommended hairstyles
P4-B06	Weekly automated business report emailed to salon owner
P4-B07	Smart rebooking reminders via WhatsApp
P4-B08	Final testing, bug fixes & performance optimisation
P4-B09	Deployment: Render, MongoDB Atlas, Koyeb (n8n), Expo EAS (APK)
P4-B10	Demo video (4–5 min)
P4-B11	FYP-2 final report (hard copy) + Panaflex (2x5 ft)

If a task is unclear or you want to split it differently, agree it with me at the meeting before you start. Abdul Wahab · FYP Advisor
